Welcome to the IOSEA Marine Turtle MoU Website!

The IOSEA Marine Turtle MoU is an intergovernmental agreement that aims to protect, conserve, replenish and recover marine turtles and their habitats of the Indian Ocean and South-East Asian region, working in partnership with other relevant actors and organisations.

IOSEA Marine Turtle - Online Reporting Facility

Welcome to the IOSEA Marine Turtle - Online Reporting Facility, which consists of two components.

Click here for Editor

The **Editor** allows IOSEA MoU Focal Points to continuously update their National Reports, by adding new information as it becomes available, and by inviting contributions from relevant stakeholders actively involved in marine turtle conservation within the country. Editorial access is restricted by password. Click the button to log in.

The content of the IOSEA reporting template is linked directly to the provisions of the MoU's Conservation and Management Plan. Extensive use is made of tick boxes and multiple-choice questions, while giving ample scope to provide more lengthy answers, where necessary.

Click here for Viewer

The **Viewer** allows all users to view and query the contents of all National Reports interactively - for example, according to: a particular **country**, any of the four IOSEA **sub-regions**, any of the six MoU thematic **objectives**, and any one of about 100 individual **activities**.

As the information submitted by Signatory States improves over time, both in terms of its comprehensiveness and precision, the facility will be an extremely valuable tool for assessing implementation and identifying gaps.

Explore the online reporting facility now to find out how useful it really is!

Online National Report Viewer - Introduction

Click here for Viewer

If you have already read the introduction, click on the button to proceed directly to the Online National Report Viewer

The Online National Report Viewer is a facility that allows users to browse the contents of all reports submitted by Signatory States to the IOSEA Marine Turtle MoU. The database presently contains reports from almost all of the 20 IOSEA Signatory States from across the Indian Ocean - Southeast Asia region. Information from other countries will be added as they become signatories to the Memorandum of Understanding.

The IOSEA MoU's Conservation and Management Plan (CMP) has six main objectives: reducing mortality, protecting habitat, conducting research and monitoring, improving awareness, enhancing cooperation, and promoting implementation. It includes more than 100 specific activities, organised under 24 separate programmes of work.

The online database contains a vast amount of information on measures the Signatory States and other partners have undertaken to implement the CMP. What kinds of information can be queried? By way of example, for any given country a user might be interested to know:

- What initiatives have been taken in cooperation with fisheries industries and management organisations to mitigate measures in national waters and the high seas?
- What measures are being applied to prohibit the use of poisonous chemicals and explosives?

OBJECTIVE III: IMPROVE UNDERSTANDING OF MARINE TURTLE ECOLOGY AND POPULATIONS THROUGH RESEARCH, MONITORING AND INFORMATION EXCHANGE	
3.1.1	Have baseline studies been conducted or other information gathered on marine turtle populations and their habitats in your country? If yes, cite any available relevant literature.
3.1.2	Are *long-term* monitoring programmes in place for priority marine turtle populations? If yes, give details.
3.1.3	Has the genetic identity of marine turtle populations frequenting the waters of your country been characterized? If yes, give details.
3.1.4	What studies have been / are being used to identify migration routes?
3.1.5	Have studies been carried out on marine turtle population dynamics and survival rates? If yes, give details.
3.1.6	Has research been conducted on the frequency and pathology of diseases of marine turtles? If yes, give details.
3.1.7	Is the use of traditional ecological knowledge in research studies being promoted? If so, how?
3.1.8	Are research and monitoring activities periodically reviewed and evaluated for their efficacy?
3.2.1	Have priority research and monitoring needs been identified and included in regional and sub-regional action plans? If yes, which plans?
3.2.2	On which of the following themes have collaborative studies and monitoring been conducted? (Give brief details for each)
3.3.1	List in order of priority the marine turtle populations in your country need of conservation actions, and indicate for each of them their population trends.
3.3.2	In what areas are research results being used to improve the efficacy of conservation actions:
3.4.1	Has your country undertaken any initiatives to standardise methods and levels of data collection, including an agreed set of protocols? If yes, give details.

Habitat Search Help - Microsoft Internet Explorer

Habitat Type and Species - Help

The potential of this query module is best explained with a few examples showing how to retrieve specific information:

Example 1: To retrieve all nesting sites in South East Asia where both *Chelonia mydas* AND *Eretmochelys imbricata* are present:

Select geographic area: Sub-region, South East Asia
Tick habitat type: Nesting
Tick species: CM, EI
Select: Match ALL criteria

Note: Because of the limitation of the source data, which does not associate habitat type to a particular species, this search result does not necessarily indicate that CM and/or EI are actually nesting at the sites displayed, though this is presumed to be the case in most instances. It does signify that a particular site is known to have nesting, and that CM or EI are found at the site (either for nesting, feeding or development). When the source data are refined in future to make such a distinction, more precise searches will be possible.

Example 2: To retrieve all sites in the Western Indian Ocean used as both feeding AND developmental habitat:

Location(s) of main activity
Ranong Province
Project Summary
WAR's sea turtle conservation & dugong research project begins on 6th December 2003 at Baan Talae Nork, along the Andaman coastline, in Ranong Province. It is being established to work towards the conservation and rehabilitation of Andama
sea turtle and dugong populations in southern Thailand. Volunteers are needed to monitor the beaches along this coastline an
on adjacent islands; this will be particularly important during the breeding and nesting season (December - March). Further
studies on marine turtle nesting population are needed to enable a more complete assessment of the importance of the area
and to provide a conservation strategy for the region.

Planned activities
Monitor, assess and conduct biological investigations at selected known sea turtle breeding sites. Facilitate sea turtle recovery
efforts. Assess impacts of fishery; tourism; building development; poaching; etc. Determine the relative nesting population
abundance for the species of marine turtles in the Baan Talae Nork region, through the monitoring of nesting activity on
beaches. Prevent poaching of nesting sites by close monitoring during the breeding season. Run a sustained educational
programme targeting schools and local people about conservation issues. Determine aspects of geographic migration,
remigration, re-nesting, nesting behaviour, and longevity through the continuation of a long-term tagging program. Construct
and maintain egg hatcheries & nurseries. Conduct cooperative research; provide technical assistance and research training; t
promote the collection, analysis, and sharing of sea turtle data. Investigate the pathology, etiology and epidemiology of
diseases (fibropapilloma), injuries and mortality rates. Develop comprehensive computer simulation models and other
quantitative tools to monitor population trends Undertake a research study into dugong populations and make scientific
assessment of decline of seagrass beds at Koh Kam Ok (small offshore island where seagrass used to be prolific
